

What's happening to our children's teeth?

You may find it shocking that more than half of Scotland's children have suffered from tooth decay.

That tooth was very very bad and I have two more that's very bad and I'm going to get to the dentist for them.

You go to the dentist and they check your mouth and teeth and they find the holes in your teeth.

When I went to the dentist he said I had a gum infection.

Your tooth falls out and then you put it under your pillow and the tooth fairy comes and takes it away there's money under your pillow.

And how big your tooth is the more money you get.

They put the fillings in and then they open my mouth before it and this is how they put it in they open the gap and put it in.
